ABSTRACT

Background: *Madhumeha* is one among the type of *Vataja Prameha* explained by Acharya Charaka. *Madhumeha* is a disease of *Bastigata vikara*. *Jambu Beeja churna* is mentioned in *Adarsha Nighantu* for *Madhumeha*. Diabetes is a metabolic disease which costs our dearly in terms of morbidity and mortality. The management of diabetes and its complications is not possible with one way approach. Due to multifactorial involvement of metabolism, people living with diabetes face many daily challenges including diet, exercise, treatment taking, psychological stress, illness and disability. **Objective:** There is a need for simple and effective medicine for the management thus the clinical study was taken up and to evaluate the efficacy of *Jambu Beeja Churna* in *Sthula Madhumehi w.s.r.* to Type II Diabetes Mellitus. **Material & Method:** A total of 20 patients who fulfilled the inclusion criteria were selected, and were administered with *Jambu Beeja Churna* 6gm twice daily before food with *Sukhoshnajala* for 45 days. The assessment parameters were *Bahuashi*, *Swapnasheelata*, *Prabhuta mutrata*, *Avila mutrata*, *Pipasaadhikya*, *Karapada Suptata*, *Karapada daha*, *Swedapradhurbhava*, *Sthoulyata*, *Dourbalya*, FBS, PPBS, FUS and PPUS. **Discussion and conclusion:** The total duration of the study group was 45 days. To infer the clinical study and to draw conclusion paired ‘t’ test was applied for within the group analysis and unpaired ‘t’ test was applied for between the group analysis. *Jambu Beeja Churna* showed highly significant results before treatment to after treatment, was found to be effective in parameters like *Swapnasheela*, *Dourbalya*, *Karapadasuptata*, *Swedapradhurbhava*, *Sthoulyata*, FBS, PPBS, and FUS.

Keywords: Diabetes Mellitus, *Madhumeha*, *Sthula Madhumehi*, *Jambu Beeja churna*, *Bastigata vikara*.

INTRODUCTION

In an attempt to reveal the secrets of healing within the spectrum of diseases; the therapeutic pearls of wisdom in the form of aphorisms delivered by our Ancient *Ayurvedic* Seers several thousand decades ago is now still on the verge of great discoveries and achievements, under the sacred healing hands of the

present day *Ayurvedic* Professionals of varied specialties. *Madhumeha* is one among the type of *Vataja Prameha* explained by Acharya Charaka¹. *Madhumeha* is a disease of *Bastigata vikara*. *Jambu Beeja churna* is mentioned in *Adarsha Nighantu* for *Madhumeha*². The *samanya lakshanas* are *Prabhuta*

– *Avila mutrata* and that of *Sthula Madhumeha* are *Bahuashi*, *sthoulyata*, *Swapnasheela*, *shayana Sheela*, *snigdha shareera*, *Dourbalya*³. The present era is full of chaos, stress & strain due to life style modifications, change in dietary habits, urbanization and industrialization. This has lead in the upsurge of many diseases and one of them is *Madhumeha*. Though *Madhumeha* is a disease known since ancient times to the mankind, its upsurge is quiet alarming. On the basis of its symptomatology *Madhumeha* can be correlated to the features of Type II Diabetes mellitus. DM is one of the most common diseases of the modern world. It is a disorder which is sparing neither the developing nor the developed nations. Irregular food habits, lack of exercise, stress and strain is some of the causative factors that make an individual more prone to develop diabetes at an early age. India has been projected by the W.H.O. as the country with the fastest growing population of Diabetics⁴. Recent studies have estimated that in the year 2000, 171 million people had Diabetes and are expected to be double by 2030⁵. Thus, in this present study, *Jambu Beeja churna* are selected to evaluate its efficacy on *Sthula Madhumeha*.

AIM & OBJECTIVES OF THE STUDY:

To evaluate the efficacy of *Jambu Beeja Churna* in *Sthula Madhumehi* w.s.r. to Type II Diabetes Mellitus.

MATERIALS AND METHODS:

20 patients with clinical features of *Srhula Madhumeha* fulfilling the inclusion criteria approaching the OPD and IPD of SKAMCH&RC, Bangalore were selected for the study.

Medicine source:

The identified raw drug required for the study were purchased from approved vendors and post purchase of raw drug was authenticated by the faculty of Dravyaguna department, SKAMCH & RC, Bengaluru.

Sampling technique

The subjects who fulfil the inclusion criteria and complying with the informed consent (IC) were se-

lected for the study. A special case proforma was prepared with details of history taking, physical signs, symptoms and lab-investigations.

The data obtained were recorded, tabulated & statistically analyzed using statistical methods i.e., Paired t-test within the group and unpaired t-test in between the groups.

Diagnostic Criteria:

The patients were diagnosed based on the following parameters^{6,7}.

- FBS >126 mg/dl
- PPBS > 200 mg/dl
- BMI > 25 kg/m²

Inclusion Criteria:

- Patients presenting with *Lakshanas* of *Sthula Madhumeha*.
- Patients with signs and symptoms of obese NIDDM
- Patients of either sex from 21 to 90 years of age.
- Blood sugar – Fasting >126 mg/dl or PPBS >200 mg/dl

Exclusion Criteria:

- Patients on any immunosuppressant drugs or corticosteroid therapy.
- Patients with juvenile diabetes, gestational diabetes.
- Pregnant & lactating women.
- Any other systemic disorders interfering with the course of the treatment.
- Type I Diabetes Mellitus.
- *Madhumeha* patients with complications like diabetic gangrene & carbuncles will be excluded from the study.

Investigations:

Blood: FBS and PPBS

Urine: FUS, PPUS, Urine routine and micro.

Assessment Criteria:

Assessment of the study was done based on subjective and objective parameters as per the proforma.

Table 1: Showing subjective and objective parameters:

Subjective parameters :	Objective parameters :
1. <i>Bahuashi</i> 2. <i>Swapnasheelata</i> 3. <i>Prabhuta mutrata</i> 4. <i>Avila mutrata</i> 5. <i>Pipasaadhikya</i> 6. <i>Karapada Suptata</i> 7. <i>Karapada daha</i> 8. <i>Swedapradhurbhava</i> 9. <i>Sthoulya</i> 10. <i>Dourbalya</i>	11. FBS 12. PPBS 13. FUS 14. PPUS

Duration of the study – 45 Days

Assessment was done before treatment (BT), on 16th day (DT 1), 31st day (DT 2), and 46th (AT) day.

ASSESSMENT CRITERIA

The following subjective and objective parameters were assessed using different grading before treatment and during the course of treatment.

Table 2: Showing gradings of *Bahuashi*:

Parameters	Gradation	score
<i>Bahuaashi</i>	Normal appetite, 1-3 meals/day	0
	Slightly increased, 4-6 meals/day	1
	Moderately increased, 7-8 meals/day	2
	Markedly increased, >9 meals/day	3

Table 4: Showing gradings of *Pipasadhikya* :

Parameters	Gradation	score
<i>Pipasadhikya</i>	Normal, 1.5-2litres	0
	Increased, 2-2.5litres but frequency is more volume of drinking can be controlled	1
	Increased, 2.5-3litres with increased excessive amount frequency (approx. once in 2 hours)	2
	Very much increased with excessive amount and very frequent intake > 3litres	3

Table 3: Showing gradings of *Prabhutamutrata*:

Parameters	Gradation	score
<i>Prabhuta mootrata</i>	3-4 times/day and one time or occasionally at night	0
	5-6 times/day and two times at night	1
	7-10 times/day and 3-4 times at night	2
	11-12 times/day and 5 times at night	3

Table 5: Showing gradings of *Swapnasheela*:

Parameters	Gradation	score
<i>Swapnasheela</i>	No day sleep, can get up early, Night sleep upto 6-8 hours.	0
	Can avoid day nap easily, bit drowsy, night sleep 6-8 hours or more.	1
	Can't avoid day nap of about 0.5 hour at least, night sleep 6-8 hours or more.	2

	Always drowsy, sleepy, day sleep 1-2 hours, night sleep 6 – 8 hours.	3
--	--	---

	Can do mild routine work and exercise	2
	Can do mild routine work and exercise with difficulty	3

Table 6: Showing gradings of *Karpadadaha*

Parameters	Gradation	score
<i>Karpadadaha</i>	No daha	0
	Karpada daha occasionally	1
	Karpada daha moderate and daily activity is not hampered.	2
	Karpada daha continues, severe and unbearable.	3

Table 10: Showing gradings of *Sthoulya* - BMI (Measured according to BMI Kg / Height in m²)

Parameters	Gradation	score
<i>Sthoulya</i>	Normal	0
	Overweight	1
	Obese	2
	Very Obese	3

Table 7: Showing gradings of *Aavila mootrata*

Parameters	Gradation	score
<i>Aavila mootrata</i>	Crystal clear fluid	0
	Faintly cloudy or hazy with slight turbidity	1
	Turbidity clearly present but news print can be read through the tube.	2
	More turbidity and news print can't be read	3

Table 11: Showing FBS & PPBS

FBS \geq 126 mg/dL (7.0 mmol/L). Fasting is defined as no caloric intake for at least 8 h.

2-h PG or PPBS \geq 200 mg/dL (11.1 mmol/L)

Table 8: Showing gradings of *Sveda pradhurbhava*

Parameters	Gradation	score
<i>Sveda pradhurbhava</i>	No sweating	0
	Sweating while doing routine work	1
	Excessive sweating while walking for a short distance	2
	Excessive sweating by slight exertion like standing, walking	3

Table 12: Showing gradings of FUS (mg/dl) *Mutramadhurya*

Parameters	Gradation	score
FUS	Negative	0
	Traces	1
	1 + / 0.5 %	2
	2 + / 1 %	3
	3 + / 1.5 %	4
	4 + / 2 %	5

Table 9: Showing gradings of *Daurbalya*

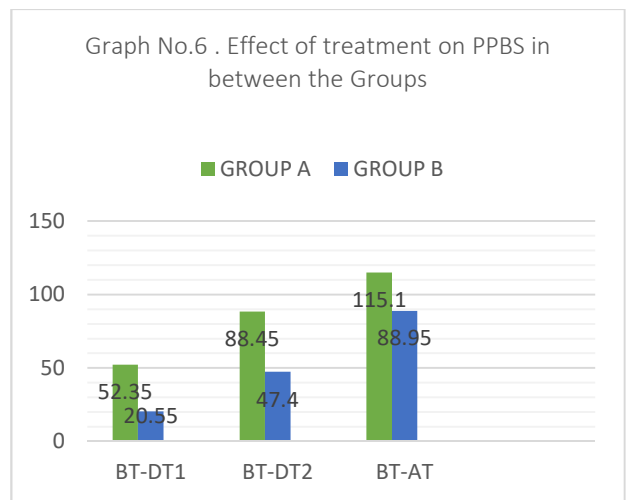

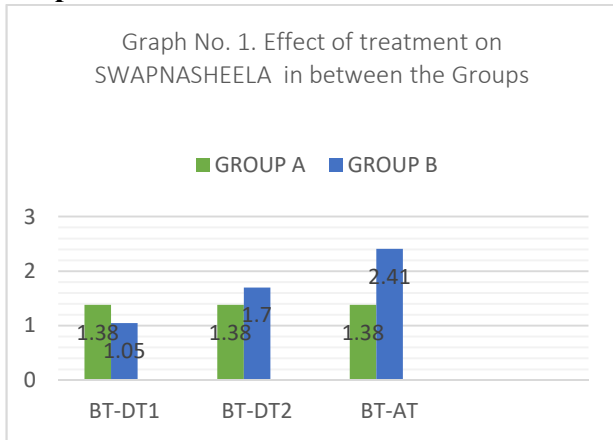

Parameters	Gradation	score
<i>Daurbalya</i>	Can do routine work and exercise	0
	Can do moderate work and exercise	1

Table 13: Showing gradings of PPUS (mg/dl) *Mutramadhurya*

Parameters	Gradation	score
PPUS	Negative	0
	Traces	1
	1 + / 0.5 %	2
	2 + / 1 %	3
	3 + / 1.5 %	4
	4 + / 2 %	5

Table 14: Showing The Results Of Parameters Within Group B

Graphs

DISCUSSION

Probable mode of action of *Jambu Beeja churna*:

1. EFFECT OF TREATMENT ON BAHUASHI:

'*Bahuashitvam Pitta Teekshna-Ushna Gunataha.*' *Bahuashi* is caused due to vitiation of *Vata* in *Koshta* as a resultant causing *Agni Sandhukshana* leading to *Atikshuda* manifesting as *Bahuashi*.

Jambu Beeja churna is having *Kashaya-Tikta Rasa, Laghu-Ruksha Guna* which does *Kaphaharana* and *Kleda Shoshana*; this may further help in *Vatanulomana* thereby reducing *Bahuashi*. This might have helped in reducing the *Bahuashi* in a better way.

2. EFFECT OF TREATMENT ON PIPASAADHIKYA:

Pipasaadhikya is caused by *Pitta Vriddhi* and *udaka kshaya*. The *Prakrutha Karma* of *Mutra* is *Kledavaahanam*, when there is *Atipravritti* beyond the normal threshold, it leads to *Shoshana* of *Ap Dhaatu* manifesting as *Pipasadhikyatha*.

Jambu Beeja Churna has *Tikta, Kashaya rasa* pacifies *Pitta* and by its *Sthambhana* property checks *Mutratipravritti* thereby alleviating *Pipasaadhikya*.

3. EFFECT OF TREATMENT ON SWAPNASHEELA:

The *Lakshana Swapnasheela*, seen in *Madhumehi* is due to excessively vitiated *Kapha* and *Dushyas* like *Meda, Mamsa* and *Shareeraja Kleda*. *Acharya*

Sushrutha states *Panchavida Kriya-Ashraya Linga – 'Sa Chaapi Gamanath Sthanam, Sthanad Asanam Ichchanti, Aasanat Vrunute Shayyam, Shayyanat Swapanam Ichchanti.'* (Su.Ni 4/25)

Jambu Beeja Churna is having *Tikta, Kashaya Rasa, Laghu* and *Ruksha Guna* which pacifies *Kapha* and does *Kleda Shoshana* which helps in reducing *Swapnasheelata*.

However, *Jambu Beeja churna* was better than *Nisha-Amalaki Churna* in reducing *Swapnasheelata*.

4. EFFECT OF TREATMENT ON

PRABHUTAMUTRATA:

Prabhutamutrata is seen in *Madhumehi* due to the *Avayava Mishribhavatwa* of *Dushyas* like *Meda, Rakta, Mamsa, Majja, Shukra, Udaka, Vasa, Lasika, Ojas* and there after the *Draveekarana* of these *dushyas* happens and they are brought to the *Basti* and excreted through *Mutra*.

Jambu Beeja churna by its *Kashaya Tikta Rasa, Sangrahi Guna* and *Sthambhana* property does *Mootra Sangrahana* and helps in reducing *Prabhuta Mootrata*.

5. EFFECT OF TREATMENT ON AVILA MUTRATA:

Avila mutrata in *Prameha* is due to the presence of *dooshyas mootra* in , which is in accordance with explanation in our *Shastra* as '*kwachiteva Prameha, kasyachiteva dooshya avayava mishribhava.*'-(Su. Ni. 6/6)

Jambu Beeja churna by its virtue of *Tikta - Kashaya Rasa, Rooksha Guna* acts in *Avila mutrata*.

6. EFFECT OF TREATMENT ON *DOURBALYA*:

In *Madhumehi*, *Dourbalya* is because of '*Asamathvat Dhatoonam*' (ch.su.21/3). The *Bahuabadha Mamsa, Meda* and increased *Shareera Kleda* is expelled as *mootra* causing *Dourbalya* seen as *Shaithilyata* in *Mamsa, Medas*. *Dourbalyata* is also due to *kapha- meda avarana* which leads to *uttarothara dhathu kshaya*.

Jambu Beeja churna by its *Tikta - Kashaya Rasa, Laghu- Ruksha, Grahi, Guna, Kleda Shoshana Karma*, removes *Avarana* of *Kapha* effectively brings about *Sthitakarana* of the *dhatus* thereby exhibits the action of *Dhatuprasadana*, increases *Prakrutha karma* of *Dhathu* and alleviates *Dourbalya* effectively.

7. EFFECT OF TREATMENT ON *KARAPADASUPTATAH*:

Karapada Suptata is explained as '*Supti Padayoh Nishkriyatvam Sparshjnata Va*' and is one of the *samanya Purvaroopas* of *Prameha*. (ch.ni.4/47). It is caused by *Rakta Margavarana* by *Kapha Dosha* and resulting in *vata prakopa* manifesting as *karapada Suptata*.

Jambu Beeja churna by its *Kashaya - Tikta Rasa, Rooksha - Lekhana Guna, Kapha Pittahara Karma* removes the *Kapha-Vata Avarana* thereby improving the circulation to *Tiryakgata Dhamanis*, by which it nourishes the *Dhamanis* and reduces *Karapadasuptata*.

8. EFFECT OF TREATMENT ON *KARAPADA DAHA*:

Karapadadaha can be understood as '*Padayoho Kurute Daham, Pitasruk Sahite Anilaha*' and '*Hastapadatala Daha Iti Pitta Ushna Gunataha*.' (*Nidana – Lakshanayo Sambandha*).

The *Tikta Rasa, Rooksha Guna, Kapha-Pittahara Karma* of *Jambu Beeja Churna* reduces *Karapada-Daha* more in *Avaranajanya Madhumeha*. Even though both drugs reveal statistically significant result, the *t* value of *Nishaamalaki* has an edge over

Jambu Beeja churna in reducing *Karapadadaha*.

9. EFFECT OF TREATMENT ON *SWEDA PRADURBHAVA*:

Swedapradurbhava is caused due to *Bahu Abadha Medas* formed due to increase mala of *medo dhathu*. This is in accordance to the explanation in our *shashtra* '*Kakshamedradijam Medomalam*' told by *Acharya sharangadhara*. (sha.pu.5/13). As the *dooshyas* involved are *Medas* and *Mamsa, Medovruddi* leads to *Swedhadhikyata* in the *Shareera*.

Jambu Beeja churna by its *Kashaya, tikta rasa, rooksha guna, kapha pittahara karma* removes *Bahu Abaddha Medas*, and does the *shoshana of kleda* thereby reducing *swedapradurbhava*.

10. EFFECT OF TREATMENT ON *STHOULYA (B.M.I)*:

Medoroga is said to be platform for *Prameha*. Obesity particularly truncal obesity is closely related to prevalence of diabetes and cardio-vascular disease. Plasma leptin, tumor necrosis factor α and non-esterified fatty acids levels are elevated in obesity and play role in causing insulin resistance. Glycemic control and insulin resistance improve with reductions in obesity.

Jambu Beeja churna by its *Kashaya, Tikta Rasa, Rooksha, Lekhana Guna, Kapha - Pittahara Karma* removes *Bahu Abaddha Meda* and reduces *Sthoulya*.

11. EFFECT OF TREATMENT ON *FBS* :

FBS can be understood as the increased *Shareeraja Kleda* which is *Sarva Deha Vayptam*. Further it is understood as increased *Abaddata of dhathu* as a result of *Dhatwagni Mandhya* which is exhibited in *Rasa* and *Rakta*. In type 2 diabetes, beta cells of pancreas failure leads to reduced basal insulin secretion in fasting state.

Jambu Beeja churna by its *Kashaya, tikta rasa, rooksha guna, kapha pittahara karma* removes *bahu abaddha medas*, and does the *shoshana of kleda*. *Jambu seed* contains *jamboline, anathocyanins, glucoside, ellagic acid, iso-quercetin, kamferol* and *alkaloids*. The *glucoside jambolin* prevents the conversion of starch into sugar and these benefits by

controlling blood sugar levels. Also it contains calcium, potassium, carotene m magnesium. Calcium directly enhances response for glucose transport and indirectly essential for insulin – mediated intracellular process in insulin responsive tissues such as skeletal muscle and adipose tissues.

This improves the *guna* of *rasa & rakta* thereby reducing FBS.

Variations are seen in the blood sugar ranges as there will be changes in *Dosha avastha* which is clearly explained in our *shashtra* as – ‘*kshnaatth ksheenam, kshanath poornam*’ in *Avaranajanya Madhumeha*.

12. EFFECT OF TREATMENT ON PPBS:

PPBS can be understood as the increased *Shareeraja Kleda* which is *Sarva Deha Vyaptam*.

In modern it occurs due to insulin resistance and in altered metabolism of glucose.

The Kashaya-Tikta Rasa, Rooksha-lekhana guna, Kapha Pittahara Karma, Ushna veerya of jambu Beeja churna does the *kapha, kleda shoshana* and hence reduces PPBS more effectively showed HS reduction in PPBS level this may be by virtue of carbohydrate absorption from intestines and improvement in peripheral utilization of glucose. But variations is seen in the blood sugar ranges as there will be changes in *Dosha avastha* which is clearly explained in our *shashtra* as – ‘*kshnaatth ksheenam, kshanath poornam*’ in *Avaranajanya Madhumeha*.

13. EFFECT OF TREATMENT ON FUS:

FUS is seen due to metabolic derangement and lower renal threshold point. It can be understood as *mootramdhuryata* explained in our classics seen due to production of *amadasha* in urine. The normal function of *mootra* is ‘*mootrasya kleda vahaanam*’ which is hampered here.

The Kashaya-tikta rasa, Rooksha guna, Ushna veerya, mootra sangrahi karma, kapha-pittahara karma of Jambu Beeja churna does the *kapha, kleda shoshana* and hence reduces FUS more effectively.

14. EFFECT OF TREATMENT ON PPUS:

PPUS is seen due to increase in the renal threshold for glucose ($= \leq 7$ mmol/l) at proximal tubules of

kidney. Glycosuria leads to excessive water loss into the urine with resultant dehydration, a process called osmotic diuresis.

It can be understood as *mootramdhuryata* explained in our classics. The normal function of *mootra* is ‘*mootrasya kleda vahaanam*’ which is hampered here.

In Jambu Beeja churna Kashaya, tikta rasa, rooksha guna, mootra sangrahi karma, kapha pittahara karma of Jambu Beeja churna does the *kapha- kleda shoshana* and hence reduces PPUS.

CONCLUSION

Madhumeha is one among the 20 types of Prameha. Madhumeha is a tridoshaja vyadhi, predominant with vata dosha and with much emphasis on *Medo Dhatvaghni Mandhyata* due to excess intake of *guru, siddha, Madhura, Sheetha Ahara* and simultaneously *Avyayama, Diwaswapna, Asyasukham* etc. Diabetes is a complex, chronic illness requiring continuous medical care with multifactorial risk-reduction strategies beyond glycaemic control and lifestyle has a major impact on disease. (Standards of Medical Care in Diabetes -2018). The prevalence of diabetes as per WHO reports in India is at 31.7 million by 2017.

In this present clinical study, where 20 patients of *Sthula Madhumeha* were administered *Jambu Beeja churna* for 45 days. *Jambu Beeja Churna* was found effective in parameters like *Swapnasheela, Dourbalya, Karapadasuptata, Swedapradhurbhava, Sthoulyata, FBS, PPBS, and FUS*, But fluctuations were seen in blood sugar ranges which is in accordance with explanation in our *Shashtra* - ‘*Kshnaatth Ksheenam, Kshanath Poornam*’ in *Avaranajanya Madhumeha*. (*A.H Ni 10/19*) which is said to be *krichra sadhya* and is evident in this study.
