ABSTRACT

Mukhpak (Stomatitis) is most common disease of oral cavity and can occur anywhere in the mouth, including the inside of the cheeks, gums, lips, palate and tongue. It can disrupt a person's ability to talk, eat and sleep. This is an observational study on 65 Mukhpak (stomatitis) patients with complaints of redness, ulceration in oral cavity, salivation, pain and burning sensation in mouth treated with 3-4 times local application of Tankan Bhasma with Madhu (Honey) up to 14th days. Study demonstrated that local application of Tankan Bhashma with honey is the so fast, simplest, economical and effective drug therapy in the management of Mukhpak due to anti-inflammatory, analgesic as well as healing property of Tankan Bhasma and Madhu.

Keywords: Mukhpak, Stomatitis, Tankan Bhasma, Madhu

INTRODUCTION

In modern life style, excessive intake of fast foods, cold drinks spicy foods mixed type of food, acidic foods, etc. and addictions of chewing betel nut, Gutkha, tobacco, smoking, drinking alcohol etc. which are characterised as Apthyakar in Ayurveda disturb the normal physiology of the body and causes many oral diseases. Stomatitis is considered as one of the prevalent oral disease worldwide characterized by redness, ulceration in oral cavity with burning sensation, salvation and pain. Stomatitis occurs anywhere in
the mouth, including the inside of cheeks, gums, tongue, lips and palate. The symptoms degree from presence of mouth ulcers, redness and erosions of buccal mucosa, burning sensation of oral mucosa, difficulty in chewing pungent and hot things and or enlargement of sublingual and submandibular lymph nodes. In Allopathic system of medicine, various vitamins, systematic antibiotics, tetracycline mouth wash, local application of thick layer of triamcinolone acetonide, local anti-inflammatory agents like kenalog, orabase etc., are being recommended in this disease. However, ayurvedic treatments for this disease are safe, effective, cheap and non-toxic. Mukhpaka often called as sarvsara roga is a disease of oral cavity characterised in Ayurveda as the paka-avastha of oral mucosa and produces ulcers in oral cavity. Pitta dosha, raktavaha and mamsa are the main dushya in Mukhpak. According to Acharya Sushruta there are 65 mukhroga which occur at seven locations such as lips, teeth, tongue, palate, throat and oral cavity and out of them 8 occur in lips, 15 in gums, 8 in teeth, 3 in tongue, 9 in palate, 17 in throat and 3 in entire mouth as described in uttartantra. To break this samprapti, pitta doshahar, rakra prasadak, vranashodhak, vranropak, shothahar chikitsa is essential. As per Ayurveda the line of treatment for mukhpak should be pittashamaka, Shothahara, Vedanasthapana, vrana-shodhana, Vranaropana, Rakta prasadaka, Mamsa dhatu pustikara. The clinical symptom of Mukhpak is comparable with stomatitis. There are many drugs described in Ayurveda literature to cure Mukhpak (Stomatitis) effectively. Sushruta praised the effect of Kshara (alkalis) so much that it can be replace Shastra karma since it does the chedna, bhedna, lekhna, daranana, shothahara and roopna karmas simultaneously without the help of Shashtra. Tankana (Na2B4O7.10H2O; Sodium tetraborate decahydrate) or purified borax a commonly available alkali appreciated as kshara raja or kshara shresta. It has own important role because of its high therapeutic value. It is a medicine that is used for the treatment of skin diseases, ulcerating sores, gingivitis, eczema, cough etc. Honey, known as madhu is one of the most important medicines used in Ayurveda for both internal and external applications and mainly used for the treatment of eye diseases, cough, thirst, phlegm, hic-cups, worm infestation, vomiting, epistaxis, leprosy, obesity, asthma, healing, wounds and diarrhoea. It is also used as a vehicle along with some medicines to improve its efficacy or to mitigate the side effects of the other medicines. In the present observational study, therapeutic potential of Ayurvedic medicine i.e. Tankan Bhasma along with madhu in 65 patients suffering from Mukhpak (stomatitis) is described

**Material and Methods**

This is an observational study based on daily OPD practice on 65 patients of age range 13-73 years with complaints of redness, ulceration in oral cavity, salivation, pain and burning sensation in mouth during chewing of food for the last 3 months visited OPD of Shri Gurudev Ayurved College department of Kayachitsa for treatment. Gender wise distributions of patients along with their socioeconomic conditions were presented in Table 1. Based on the symptoms and clinical feature they are diagnosed with the disease Mukhpak (Stomatitis). Patients were treated with oral application of 500 mg Tankan Bhasma with 2 ml madhu for three to four times in a day and advised to stop sour, hot and spicy food article. Present study was carried out in accordance with ethical principles by following International conference of Harmonization-Good Clinical Practices Guidelines (ICH-GCP).

**Criteria for Assessment:** The treatment result was assessed in the form of different levels of grades assigned to the clinical sign and symptoms.

**Clinical Assessment**

Clinical assessment was done on alternate 0 day and 14th day. Follow up of the patients was also performed on 7th days. Change in symptoms before and after treatment were recorded at each follow up and recorded in the form of qualitative data and further converted to quantitative data for statistical analysis. Grading was given for every clinical feature. The signs and symptoms were assessed by adopting suitable scoring method. The details are as follows.
<table>
<thead>
<tr>
<th>Symptom</th>
<th>Grading</th>
</tr>
</thead>
<tbody>
<tr>
<td>Redness</td>
<td>0 No redness. 1 Mild redness. 2 Moderate redness. 3 Severe redness. 4 Extreme redness</td>
</tr>
<tr>
<td>Ulcer in mouth</td>
<td>0 No ulceration in oral cavity. 1 1-2 ulcers in oral cavity. 2 2-3 ulcers in oral cavity. 3 4-5 ulcers in oral cavity. 4 More than 5 ulcers in oral cavity</td>
</tr>
<tr>
<td>Salivation</td>
<td>0 No salivation in oral cavity. 1 Wild salivation (1-2 times spitting) in a day. 2 Moderate (3-4 times spitting) in a day. 3 5 to 7 times spitting in a day</td>
</tr>
<tr>
<td>Pain</td>
<td>0 No pain in ulcers in mouth. 1 Mild pain in ulcers in mouth. 2 Moderate pain in ulcers in mouth. 3 Severe pain in ulcers in mouth. 4 Extreme pain is ulcers in mouth</td>
</tr>
<tr>
<td>Burning sensation during food intake</td>
<td>0 No pain in ulcers in mouth. 1 Mild pain in ulcers in mouth. 2 Moderate pain in ulcers in mouth. 3 Severe pain in ulcers in mouth. 4 Extreme pain is ulcers in mouth</td>
</tr>
</tbody>
</table>

**Statistical analysis:** The data obtained was analyzed for significance between the groups by student t-test using statistical software programme “SPSS evaluation version 22”.

**Results:** Results of the observational study showed that among 65 patients of stomatitis included in this study, male and female were 32 and 33 respectively (Table 1). The age ranges of male and female subject were 25-73 years and 13-63 years respectively. Figure 1 shows the occupation wise distribution of Mukhpak patients. It was observed that Mukhpak is a common disease in all the age groups of present era.

**Table 1:** Gender wise distribution of the patients selected for the study

Results of the Table 2 showed that the local application of Tankan Bhasma with Madhu have resulted in clinically marked improvement in the symptoms of Mukhpak which are statistically significant (P < 0.001). There was a rapid decline in redness (98.82 %), ulceration in oral cavity (98.44 5), salivation (99.21%), pain (99.60) and burning sensation in mouth during chewing of food (95.47%).
**DISCUSSION**

*Mukhpak* (Stomatitis) is a very common disease of oral cavity in India as well as Asia due to heavy consumption of *pitta prakopakaahar* like spicy oily food, tobacco chewing, smoking, alcohol consumption, fast food etc. and also *pitta prakopak vihar* like late night sleeping, improper timing of meals, lack of exercise etc. According to *Ayurveda*, in this condition *Mukha* is affected by *Paka* process which is always associated with *pitta Dosha* and patient feels irritation, pain and burning sensation during food intake. It may also occur due to addiction like tobacco, wine etc. *Insomnia*, vitamins deficiency, and life-threatening disease like malignancy, sub mucosal fibrosis disturbances in gastrointestinal tract. It is very important to have effective, economic & without any side effect, medicine on it. So here an attempt is made to treat stomatitis with *Tankan Bhasma* with *Madhu*.

*Tankan Bhasma* has both bleaching and antiseptic properties which ultimately eradicate pathogens. Honey has been described in ancient and modern medicine as being effective in the healing of various infected wounds, healing of burns, ulcers and open wounds, which believed to be related to its constituents since fructose, the predominant sugar in honey, is very hygroscopic. *Madhu* or honey is probably adsorbing toxins from the mucous membrane and precipitate protein, so the pus and inflammatory exudates become adsorbed by the natural honey, thus protecting the underlying tissues and enhanced normal healing and the epithelialization.

The natural honey is sticky viscous solution that is the way to make it adherent to the ulcer. Coating the ulcer and prevention of secondary infection is the probable mechanism of action of *Madhu*. No allergic mucosal reaction or toxic effects have been reported with the usage. Results of the present study demonstrated highly effective, therapeutic and significant potential of *Ayurvedic* medicine in management of *Mukhpak* or stomatitis. It may be due to anti- inflammatory, analgesic as well as healing property of *Tankan Bhasma* and *Madhu*. Study demonstrated and confirms that local application of *Tankan Bhasma* with *Madhu* is the so fast, simplest, economical and effective drug therapy in the management of *Mukhpak*.

**CONCLUSION**

Present observational study showed that stomatitis is of the commonest oral diseases in India and found in all the age groups. Local application of *Tankan Bhasma* with *Madhu* is effective medications for the treatment of *Mukhpak* (stomatitis). These remedies are being practiced in *Ayurveda* and are cost effective and easily available.

**Recommendation**

The present study is an observational study based on the clinical practice. Moreover, a well-structured standardized randomized placebo-controlled study is recommended.
