ABSTRACT

Migraine is the world’s most disabling medical illness. It is three times more common in women than men. It is an episodic headache disorder usually characterized by pain involving either half of the head. According to International headache society, Migraine constitutes 16% of the primary headache and affects about 10-20% of the general population. Ardhavabhedaka is mentioned under Shiroroga (Diseases of head) which can be correlated with migraine. The available treatment is also not free from drawbacks like – drug dependence, drug withdrawal syndrome, relapse of headache within hours and chances of getting chronic headache. Hence, to explore an effective line of treatment for Migraine. In contrast to that Ayurveda has a variety of natural medications in the treatment of various types of Shiro Rogas. Nasya Karma (Errhine Therapy) is considered as the best therapeutic intervention in Shiro Roga by Acharya Charaka. Mishraka sneha is mentioned by Aharya Vagbhata in Gulma Chiktisa for Vatavyadhi, Kostha suddhi and Bruhana Nasya with Sarpi and Kshira mentioned by Acharya Yogaratnakar, Acharya Sharangdhar. So, an attempt has been made to assess the efficacy of Bruhana Nasya in the management of migraine in this single case study. After 7 days of Nasya Karma, and Mridu Virechana considerable improvement was seen in the clinical features of Migraine.

Keywords: Migraine, Ardhavabhedaka, Mishraka Sneha, Mridu Virechana Nasya, Kshira, Sarpi.

INTRODUCTION

Migraine is a highly prevalent disorder worldwide; the most sensitive criterion for migraine is headache worsening with activity. Migraine is the most common vascular headache. Vascular theory of brain held that migraine symptoms were a function of hyperaemia and ischemia. Pain appears to be related to desensitization of peripheral perivascular nerve terminals, possibly a consequence of distended meningeal blood vessels leading to activation and sensitization of the central trigeminal system¹. Prevalence of Migraine in India is 16-20%². Acharya Sushruta has mentioned 11 types of Shiro Roga (Diseases of head)³; one of them is Ardhavabhedaka in which paroxysmal unilateral headache associated with vertigo and pain of varying intensity is seen⁴. This can be correlated with Migraine in modern context. UrdhvaJatrugata Rogas (Diseases of supraclavicular region) and their management have a special place in Ayurveda. Shirah (Head) being the
prime seat of knowledge and also the prime controller of the entire body has been termed as Uttamanga (superlative organ)\(^5\). Hence, the diseases occurring in the Urdhva-jatru have been very clearly highlighted in the Ayurvedic classics along with their management. Nasa (nose) has been considered as the gateway of Shirah\(^6\). Nasya karma is indicated to uproot the deep-seated diseases of head. In this case study migraine has been correlated with Ardhavabhedaka for the purpose of modern parlance. For this single case study, Kshira-Sarpi were selected for Nasya Karma.

AIM: To evaluate the efficacy of Mridu-virechana (Mishraka Sneha) and Bruhana Nasya (Kshira-Sarpi) in the management of Migraine (Ardhavabhedaka).

CASE REPORT:
A 46 years old female patient visited OPD of Shalaka tantra, IPGT and RA Hospital, Jamnagar.

- **Chief complaints:**
  - Headache involving half side since last 8 years.
  - Interval of headache was 15 days to one month.
  - Severity of headache was increased since last one month and interval was on alternate day since 15 days.
  - Vertigo since 2 year
  - Associated complaints were heaviness in abdomen, bowel habit-irregular, distension of abdomen, burning in upper abdomen, Nausea, Vomiting, Photophobia, irritability, anger.

- **Aggravating factors of headache**
  - During menstruation it provokes
  - Stale food
  - Lack of Sleep
  - Stress
  - Hunger
  - Sun light
  - Noisy surroundings
  - Beverages

- **Relieving factors were only Analgesics.** She used to with Migrest solo (10mg) medicine for headache.

- **Past history:** Costipation, Allergic rhinitis.

- **Patient was diagnosed with Migraine (Ardhavabhedaka) on the basis of clinical features and after assessing** Dosha, Agni, prakriti, satva, Satmya, Abhyavaran –Shakti, Jaran-shakti, Bala, Vaya, etc., \(Nasya\) with \(Kshira-Sarpi\) was planned for 7 days. Ingredients of Bruhana Nasya are mentioned in Table 1. Mishraka Sneha was given to the patient in the dose of 2-3ml at night for 7 days before administration of Bruhana Nasya. Ingredients of Mishraka Sneha are mentioned in Table 2. After completion of Nasya Karma Shadanga paniya was start for 15 days.

PATHYA-APATHYA
- **Nidanparivarjana** is also important, the patient was advised to avoid Nidana (caus. Patient was advised to avoid heavy-food, Stale food, missing meals and avoid beverages and not to avoid natural urges.

- **Diet regimen like intake of half boil Dhanyaka water, Narikel jala.**
- **Intake of Madhura, Laghu (light) food items such as Kushmanda, Mudga, Shastisali**
- **Psychiatric condition such as depression, mania, social phobias, and anxiety may also aggravate the symptoms.** So, she was advised to avoid any kind of physical or mental stress, if possible.

ASSESSMENT CRITERIA:
The improvement was assessed on the basis of relief in the signs and symptoms of the disease. Scoring pattern for subjective criteria is recorded in Table 3.

METHOD OF ADMINISTRATION OF NASYA
- **Shihanika Abhyanga (Urdhva-jatrugata) with tila taila (local massage) of scalp, forehead, face, and neck were performed.**\(^7\)
- Then swedana karma (Hot fomentation) done.
- **Patient was made to lie down in supine position with head low position.**\(^8\)
- **Then lukewarm Kshira-Sarpi (mix) was instilled slowly in either of the nostrils in increased dosage.**
- **The patient was advised to sniff the instilled drug once followed by slow breathing.** The dosage form is mentioned in Table 4.
- **After the administration of Nasya, the patient was advised to remain in supine position for a minute (time of counting up to 100).**\(^9\)
Spit out medicines which come in mouth. Patient was again subjected to fomentation on supraclavicular region and then advised to gargle with warm water to expel out the residual mucous lodged in throat.

The patient was advised to avoid dust, smoke, sunshine, alcohol, riding, anger, excess fatty and liquid diet, day sleeping, cold water for any purpose like panã (Drink), snana (Bath) etc.

RESULTS:
After 7 days of Bruhana Nasya improvement was observed in almost all clinical features, which are summarized in Table 4. Intensity of headache was reduced and duration and frequency of pain was also decreased considerably. There were also improvement in symptoms like photophobia and phonophobia. Observations in this regard study needs to be conducted on a larger sample for a longer duration with a follow up period of about fifteen days.

CONCLUSION
This was a pilot study to manage migraine by using Bruhana Nasya. By this single case study it may be concluded that Mrudu Virechana with Mishraka Sneha and Bruhana Nasya is effective in the management of Migraine (Ardhavabhedaka) by virtue of its Tridosha Shamaka property. Better results were found through Nasya by reaching actual site of pathogenesis. However, to produce more effective conclusions in this regard study needs to be conducted on a larger sample for a longer duration with a follow up period of about fifteen days.

ACKNOWLEDGMENT
The sincere thanks to Dr. D.B.Vaghela, Associate professor and Dr. Deepak Pawar, Assistant Professor, Department of Shalakya tantra I.P.G.T. & R.A, Gujarat Ayurved University, Jamnagar for their guidance.
