ABSTRACT

Ayurveda, the science of life, deals the organism in a holistic way gives importance in maintaining health than the treatment of diseases. It gives more weight age to the prevention than the cure. So, our ancient acharyas explained Ritucharya which means methods for adapting with the changing environment which is not in our control. Natural calamities including epidemics and pandemic diseases are described in Ayurveda under the heading of Janapadodhwamsa. Such diseases having similar signs and symptoms affecting many people of a town or state at a time can destroy the whole town, so they are called Janapadodhwamsa. This paper attempts to throw light on the dietics and regimen told in Rithucharya and janapadodhwamsa for control of epidemics

Keywords: Janapadodhwamsa, Rithucharya, Epidemic

INTRODUCTION

Universe is a system which is changing in each fraction of seconds. Solar system is a part of universe which also has the same fashion. Earth is the one planet among the solar system in which the evidence of life is proven. Life originated 3.5 billion yrs. before in earth. Scientists believe that living organism is a replica of the whole universe i.e., Microsome in a macrosome. So, the change in nature has its impact on the living body. Living organism can exist only when it has harmony with the nature. Otherwise every living organism may be extinct as a part of evolution.

The term homeostasis in the modern science defines that it is the maintenance of constant internal environment of the body. Here it is not a static equilibrium. It is a dynamic equilibrium. As the change in external environment has its influence in the living organism, the importance of maintaining equilibrium with the nature is inevitable. Ayurveda, the science of life, deals the organism in a holistic way gives importance in maintaining health than the treatment of diseases. It gives more weight age to the prevention than the cure. So, our ancient Acharyas
explain *Ritucharya* which means methods for adapting with the changing environment which is not in our control. *Rithu* or season appear in nature due to the movement of sun, the prime energy source of the nature. As part of the movement of sun 6 *Rithus* manifest with diverse characteristics. *Charya* means the *Anushtana* or modifications which can make us in harmony with the environment. *Acharyas* explain modifications in in every aspect of life such as *Ahara*, *Viharas*— bath, dress, sexual life, sleep etc. which help them to cope up with the environment thus help to lead a qualitative life. Ultimately help us achieve all the aims of life. 

Natural calamities including epidemics and pandemic diseases are described in *Ayurveda* under the heading *Janapadodhwamsa*. Diseases having similar signs and symptoms affecting many people of town, state and country at a time and can destroy the whole province is named as *Janapadodhwamsa*. According to *Charakasamhita* factors involved in *Janapadodhwamsa* which in turn lead to vitiation of environmental factors are air, water, place and climate. War and other man-made calamities are also the causative factors for *Janapadodhwamsa*. According to *Chakrapani* there are two kind of causes for diseases, *Sadharana* (typical) and *Asadharana* (atypical). Atypical is subjective cause that varies from human to human like food, habits etc., which vitiates *Dosha*. Typical is common to many people like air, water, place and climate. Diseases due to such common causes are called *Janapadodhwamsa*. Among four factors *Kala* is considered as supreme among other three factors since *Kala Dushti* may lead to vitiation of other three factors. *Kala* has direct relation with *Rithu* if *Ritucharya* is followed properly we can tackle *Kala Dushti* effectively.

**Classification of season according to Ayurveda**

The year according to *Ayurveda* is divided into two periods *Ayana* (solstice) depends on direction of movement of sun. *Uttarayana* (northern solstice) and *Dakshinayana* (southern solstice). Each *Ayana* is formed of three *Ritus* (seasons). The word *Rithu* means “to go.” It is the form in which the nature expresses itself and present form in short, the seasons.

A year consists of six seasons, namely, *Shishira* (winter), *Vasanta* (spring), and *Grishma* (summer) in *Uttarayana* and *Varsha* (monsoon), *Sharata* (autumn), and *Hemanta* (late autumn) in *Dakshinayana*. As *Ayurveda* has its origin in India, the above seasonal changes are observed predominantly in Indian subcontinent.

**Cause of vitiation of health according to Janapadodhwamsa**

The primary cause for vitiation of these factors is *Adharma*. *Adharma* will lead to *Prajnaparadha*, which will vitiate the external environment and internal *doshas*. *Prajnaparadha* according to *Charakasamhitais* caused by the people indulging in unwholesome activities due to ignorance, lack of understanding and loss of memory it will vitiate all *doshas*. It is clear from above that this will again leads to *Adharma* and cause diseases again. Sins of the present life and misdeeds of the past life are the root cause of the vitiation of air, water, climate and season. Intellectual profanity constitutes the origin of sins.

**Do’s and Don’ts In Ritucharya**

   • Rain water or water from deep wells, well boiled for drinking

6. Sarat Foods which are:
   • Bitter
   • Sweet
   • Astringent
   • Easily digestible such as
     1. Rice
     2. Green gram
     3. Sugar
     4. Gooseberry
     5. Point gourd
     6. Honey
     7. Meat of animals of desert like lands

   • Alkaline foods
   • Satiation with hearty meal
   • Curds
   • Oil
   • Muscle fat
   • Strong liquors

Importance of RithuShodhana
One should undergo regular Rithushodhana (bio purification procedures) which are mentioned in classics in order to maintain proper nourishment of Dhathu, healthiness of Dosha, proper evacuation of Mala from the body according to respective Rithus. Vasantaritru-evacuative measures, such as Vamana and Nasyaare advised along with Kavala (gargle), Dhooma (smoking), Anjana (collyrium) Varsha Rithushodhana- Medicated Basti (enema) is prescribed as an evacuative measure to expel vitiated Doshas. Shararitushodhana- Medical procedures, such as Virechana (purging), Rakta-Mokshana (bloodletting), etc., should be done during this season. Rithushodhana will help in eradicating wastes in our body and keeps the body healthy.

Characteristics of vitiated factors of Janapadodhwamsa
Land having following characteristics is considered to be harmful- abnormal color, smell, and touch, excessive stickiness, abundance of serpents, pests and wild animals, mosquitoes, Having excess of grass, weeds and creepers, with abundance of smoke in the wind, presence of wild cries of birds and dogs, bewilderment and pain in animals and birds5. Time and water having following characteristics is considered to be harmful- perversion or absence of religion, truth, modesty, conducts and other qualities of the inhabitants of land, constant agitation and overflow of water reservoirs, frequent occurrence of meteorites, and earthquakes in the nature. Appearance of roughness and coppery, red and white colored stars, their appearance as if they are covered with a net of clouds. Confusion, excitement, apprehension, lamentation and darkness in the atmosphere and presence of excessive crying noise as if the country is seized by demons. Manifestation of these characteristics contrary to the normal conditions of the various seasons is harmful6. The above mentioned four factors along with their respective features of vitiation are considered by the wise to be responsible
for the destruction by epidemic diseases. When these factors are having qualities opposite to above, they are useful for human beings\(^7\). Impairment of *Vata, Jala, Desa* & *Kala* are more lethal in their increasing order. That means impairment of *Kala* is most dangerous. Specialist should know that, it is easier to correct the vitiation of air, water and land, than those of *Kala*\(^8\).

**Line of treatment of epidemic diseases:**

*Panchakarma* – *Panchakarma* is the best treatment for vitiation of four factors *Rasayana* therapy – *Rasayana* therapy done with medicines that are collected before onset of epidemic diseases restores physical health and adoption of *Sadvrutta* and *Brahmacarya* is told as remedy\(^9\).

**DISCUSSION**

In order to conclude one who desires for healthy and happy life, one has to follow regular preventive principle told in *Ritucharya Adhyaya* mentioned in *Ayurveda* for the prevention of diseases. Following *Ritucharya* is vital in maintaining health of an individual. One has to take care of disease in its initial stages itself to prevent further propagation of disease to a limit. *Asatmyaidriyarth samyoga, Prajnaparadha, Parinama* is mentioned as a root cause disease. Adopting diet and regimen according to *Rithu* and doing *RithuShodhana* properly will surely help to preserve health and remove toxins from the body. Proper diets with proper *Shodhana* and avoiding *Prajnaparadha* as mentioned in *Ayurveda* will help to maintain physical and mental health which inturn will help to maintain health of society and as to prevent epidemics as mentioned in *Janapadodhwamsa*. So, adopting the *Ritucharya* and preventive measures of *Janapadodhwamsa* will help to tackle epidemics and health.

**CONCLUSION**

According to *Ayurveda Janapadodhwasa* is the cause of epidemics and pandemics. Avoiding *Prajnaparadha* and following proper *Ritucharya* will prevent *Janapadodhwamsa* which inturn help to maintain health of the society.
